Custom Mesh Bags and Filters for Allograft Processing

Choose J-Pac Medical, the right manufacturing partner from start to finish.

J-Pac Medical is now a supplier of custom fabricated mesh bags and filters for Tissue Banks that are involved in the preparation of allografts for medical / surgical applications!

These processing kits provide quality improvement, processing efficiency and cost savings. Our custom shaped and assembled components are:

- Commonly used to contain tissue during various soaks and washes that decontaminate and prepare allograft products for implantation;
- Made with medical quality textiles, and incorporate easy closing and opening mechanisms;
- Terminally sterilized and provided in ready-to use formats and packaging;
- Medical grade textiles with biocompatibility and traceability.

Let's talk about how J-Pac can provide components and kits for use within your tissue preparation processes.
